

EXPERIMENT – 2 – GENERATION OF SQUARE WAVE USING PROTEUS

NAME: TEJASWINI M

REG NO.: 192411079

SCHEMATIC CAPTURE

SOURCE CODE

The screenshot displays the Source Code window of Proteus 8 Professional. The code is written in assembly language for the AT89C51RD2 microcontroller. The code is organized into sections: ORG, MAIN, DELAY, and END. The code uses various assembly instructions like MOV, SETB, CLR, and DJNZ to generate a square wave. The code is as follows:

```
1 ORG 0000H
2
3 MAIN:
4   SETB P2.0 ; P2.0 = HIGH
5   ACALL DELAY
6
7   CLR P2.0 ; P2.0 = LOW
8   ACALL DELAY
9
10  SJMP MAIN
11
12 DELAY:
13  MOV R4,#5
14  L1: MOV R3,#255
15  L2: DJNZ R3,L2
16  DJNZ R4,L1
17  RET
18
19 END
```

The bottom status bar indicates 'Firmware is already compiled.'
